

GMAS Release 1_28

March 12, 2011

GMAS HOMEPAGE ENHANCEMENTS

- New dashboard is available from the GMAS homepage by selecting Sponsor notices. The dashboard displays sponsor notices and awards logged as received by the central sponsored offices, but not yet awarded (i.e. no action memo has been issued). Depending on a user's security, selection can be made to view notices per University tub.
- A new system-to-system (S2S) opportunity number look up feature has been added to the GMAS homepage. The Search S2S opportunities link on the homepage takes users to a screen where they can enter Grants.gov opportunity numbers to determine if GMAS supports mandatory and optional forms required for S2S submission.

REQUESTS

- On the request homepage, the <Initiate internal review> button has been renamed to <Lock and route for signatures>.
- Bug fixed that was causing requests to appear on the requests in process dashboard multiple times when an organization acronym is edited.
- The RR budget will now always show "PD/PI" instead of "Principal Investigator" for non-NIH S2S applications.
- For those requests on awards under institutional authorities (i.e. UPAS), the optional signature requirements for Principal Investigator, Department Chair, and Dean/Designee roles will default to unchecked.

SEGMENT REVISION

- The administrative salary approval question language has been changed to "Are administrative salary costs included in the approved budget?"

LETTER OF CREDIT (LOC)

- The logic in the LOC Reconciliation Results Report was updated to accurately reflect data per June closing selection.

OTHER

- Super users are now able to modify inbox preferences for people in GMAS.
- Modifications made to the Content Management Systems which will allow for edits to instructional text outside of system releases.

INTERFACES

- Improved error messages for Chart Security Maintenance Application (CSMA) and Identity Management (IDM) interface monitoring.
