

# GMAS Release 1\_29

June 18, 2011

## Global enhancements

- The behavior for fellowship projects has been modified.
  - The GMAS role of PI will now display as Mentor.
  - The GMAS role of Fellow will now display as PI.
  - Note: HMS fellowship projects will not see any changes.
- A new segment status of *Not Funded* has been introduced; this new status indicates projects that were submitted to sponsor, but not funded. *Not Funded* projects are those in which all requests are in a terminal status (example: *Rejected by sponsor, Closed, Withdrawn, Declined per Harvard University*). Projects in *Not Funded* status can be selected for revised submission.

## Requests

- A new feature has been added to allow super users the ability to "rollback" requests in the following statuses: *Submitted to sponsor, Rejected by sponsor, Closed, Withdrawn, Declined per Harvard University*. Rollback will bring the request back to the previous status and can then be modified or deleted. Note: system-to-system (S2S) requests cannot be rolled back if in *Submitted to sponsor* status.
- Users can now save search parameters on the Requests in Process dashboard. New search criteria has also been added to this dashboard: Tub, Due Date, and Grants.gov via GMAS.
- For system-to-system (S2S) application, the e-questions for the PHS398 form are now included for all proposals types (not just competing renewals).

## People

- A new person approval has been added to the Person module to track responsible conduct of research (RCR) training. The new screen captures the following data for online and in person RCR training:
  - Granting institution
  - Completion date
  - Expire date
  - Comments

## Letter of Credit (LOC)

- The LOC upload process updates DHHS and NSF awards that were previously uploaded when there were no corresponding GMAS segments. These awards are now included in search results and report downloads.
- The LOC reconciliation screen has been corrected so that the sum of account expenses will always match the document reference level expenses.
- The LOC module has been updated to display all funds associated to a segment.

## Segment Revision

- The *Agency LOC number* field is editable only by a super user after the initial segment revision.
- The *CFDA number* field is a required field for federal projects.

## Technical

- Upgrade to Weblogic 10.3.4 / Java 1.6.0\_24.
- Fixed monthly job for Page\_Views table from truncating the entire table. It now truncates data older than 6 months.
